## 1. SPECIFICATIONS

### PHONOGRAPH MOTOR AND PLATTER

Motor type.....	Quartz PLL Hall motor
Drive system .....	Direct drive system
Speed of rotation.....	2 speeds: 33-1/3, 45 rpm
Wow and Flutter .....	Less than* 0.012% (WRMS) 0.025% (WRMS) $\pm 0.035\%$ WTD Peak (DIN)

Values marked with an \*\*\* designate the wow and flutter for the motor, and do not include the cartridge or tonearm load.

S/N ratio..... More than 78 dB (DIN-B)

Platter..... Diameter ø304 mm, aluminium die-cast

### TONE ARM

Type .....	Static balance straight pipe arm
Usable cartridge weight.....	3 g (min.) to 8 g (max.)

### SUPPLIED CRATRIDGE

Type.....	MM type
Replacement stylus.....	PN-260
Stylus.....	0.6 mil diamond
Output voltage .....	2.5 mV (1 kHz, 5 cm/s, LAT Peak)
Suitable stylus pressure .....	1.5 – 2.5 g (Optimum value 2.0 g)
Frequency response.....	10 Hz – 30,000 Hz
Head shell type .....	Universal type
Cartridge weight .....	5.7 g
Load resistance.....	47 kΩ

### POWER SUPPLY, OTHERS

Power requirements .....	a.c. 220 – 240 Volts ~, 50/60 Hz
Power consumption .....	11 W
External dimensions .....	420 (W) x 118 (H) x 366 (D) mm 16-9/16 (W) x 4-5/8 (H) x 14-3/8 (D) in
Netweight.....	5.4 kg (11 lb 14 oz)

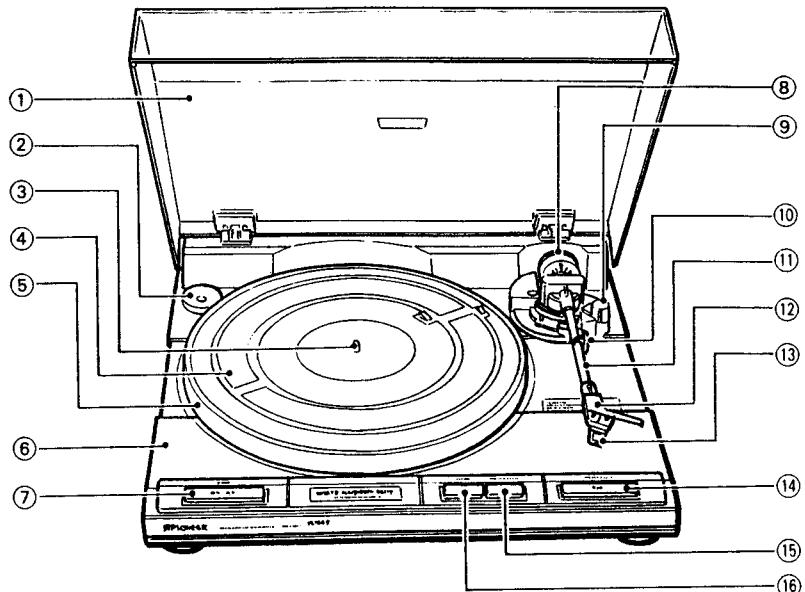

### SUPPLIED ACCESSORIES

EP adaptor .....	1
Operating instructions .....	1

### NOTE:

Specifications and design subject to possible modification without notice, due to improvements.

## 2. PANEL FACILITIES

① Dust cover

② EP adaptor

Place over spindle to play 45 rpm singles.

③ Spindle

④ Platter mat

⑤ Platter

⑥ Cabinet

⑦ SPEED selector (■ 33/■ 45)

Set to 45 for 45 rpm records.

Set to 33 for 33-1/3 rpm records.

⑧ Counterweight

⑨ Antiskating control

⑩ Armrest

⑪ Tonearm

⑫ Headshell

⑬ Cartridge/Stylus

⑭ PLAY/STOP button (► / ■)

Press to start automatic play and to stop play.

⑮ ARM-ELEVATION control (▼ / ▲)

Moves tonearm up and down.

⑯ REPEAT button (↻)

The disc will be played repeatedly if this button is in the depressed position. Press again to cancel repeat play.

### 3. EXPLODED VIEWS AND PARTS LIST

#### 3.1 EXTERIOR

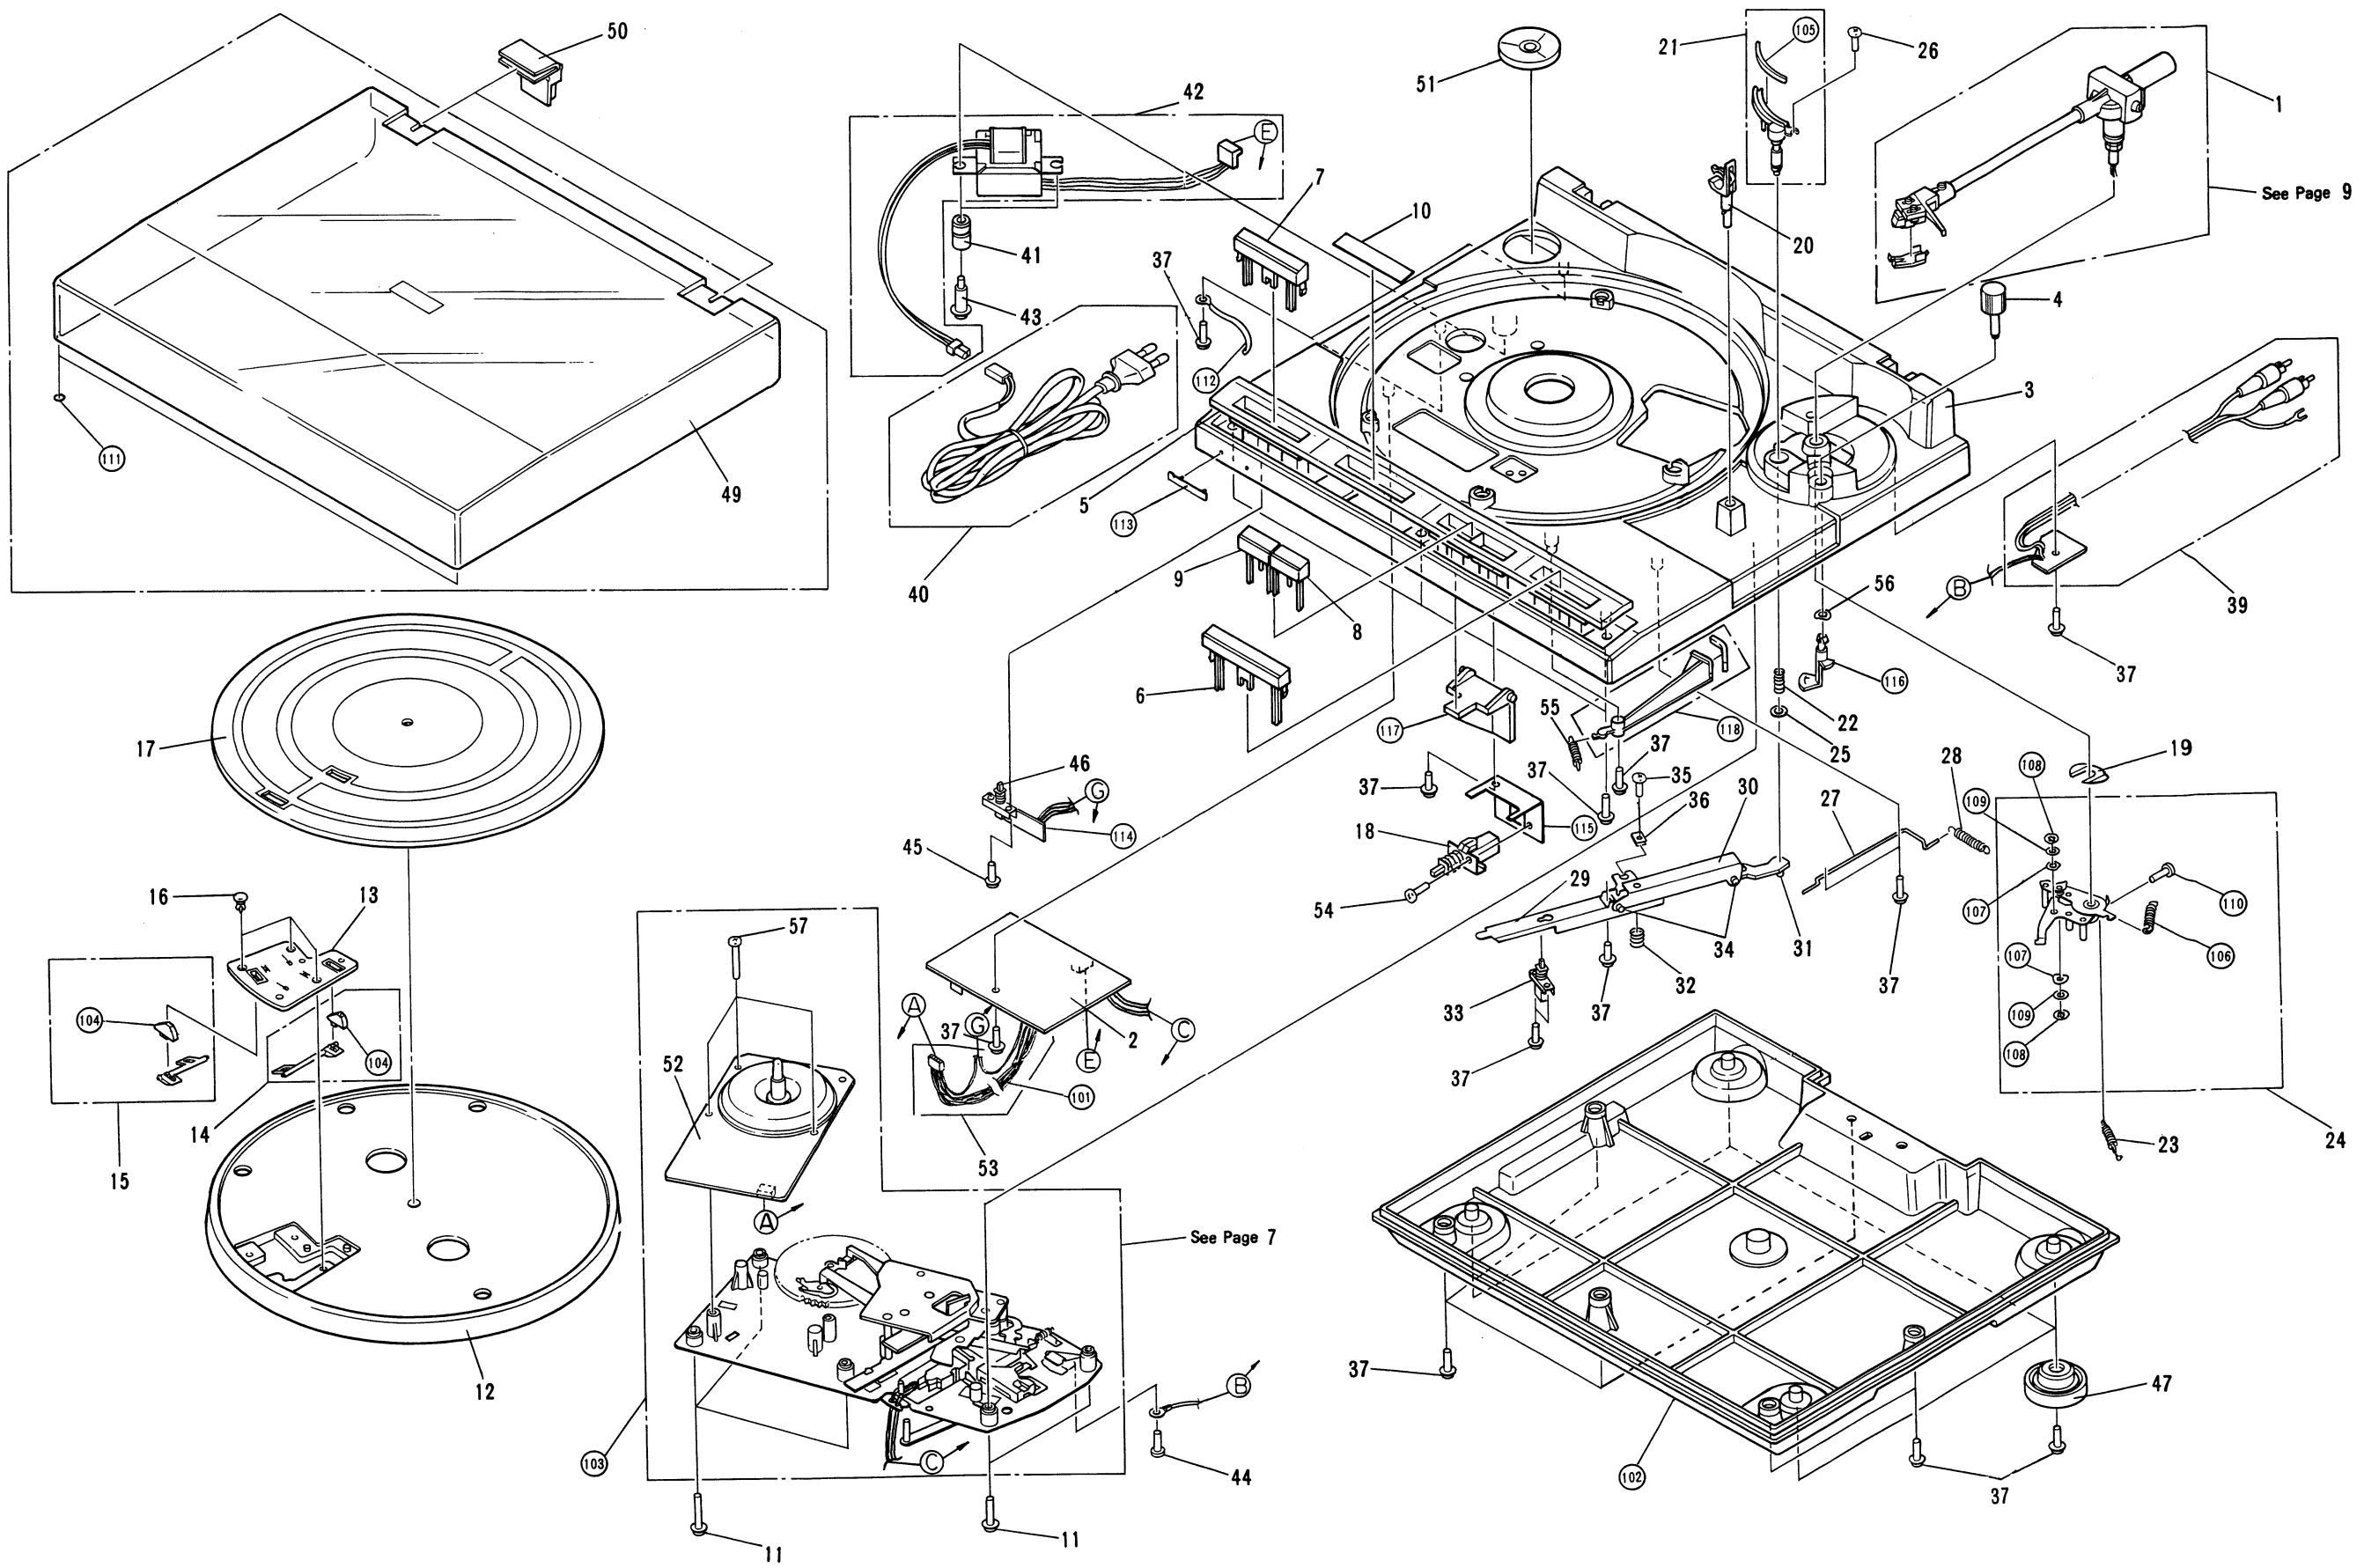

**NOTES:**

- Parts without part number cannot be supplied.
- The **⚠** mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by “**◎**” are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

## 7. ELECTRICAL PARTS LIST

### NOTES:

- Parts without part number cannot be supplied.
- Parts marked by “◎” are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
- The △ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560Ω	$56 \times 10^1$	561.....	RD1/4PS	5	6	J
47kΩ	$47 \times 10^3$	473.....	RD1/4PS	4	7	J
0.5Ω	0R5.....	RN2H	0	5	K	
1Ω	010.....	RS1P	0	1	K	

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62kΩ	$562 \times 10^1$	5621.....	RN1/4SR	5	6	2	F
--------	-------------------	-----------	---------	---	---	---	---

### MISCELLANEOUS PARTS

#### P.C. BOARD ASSEMBLIES

Mark	Symbol & Description	Part No.
	Power supply assembly	PWR-084
	Switch board assembly	No supply
	Motor P.C.board assembly	PWM-197

### OTHERS

Mark	Symbol & Description	Part No.
△	Motor assembly	PXM-141
△	S1 Microswitch (POWER)	PSF-023
△	Power transformer assembly	PTX-070
△	Power cord assembly	PDF1072

	(RCX-012)	PSZ30P050FMC
Screw (3×6)		PBZ30P100FMC
Screw (3×10)		LA1,LA2,LB1,LB2 Coll
		PTL-017

### SWITCH BOARD ASSEMBLY

#### SWITCH

Mark	Symbol & Description	Part No.
	Switch (SPEED)	PSG-050

## 8. ADJUSTMENTS

### 8.1 MOTOR OPERATION ADJUSTMENT

1. Remove the underbase.
2. Connect the Ach of a dual trace oscilloscope to the circuit board unit, Q3 (PD0008) pin 15, and GND. Adjust the time axis so that 1 period of the output waveform is equal to 8 divisions in the 33 rpm mode. Fig. 8-2 (a).
3. Connect the Bch of a dual trace oscilloscope to Q1 (PA2017) pin 15, and GND. Adjust VR2 (45 rpm) so that the relation between the Ach and Bch waveforms in the 45 rpm mode is as shown in Fig. 8-2 (b).
4. Set the turntable to 33 rpm and adjust VR1 (33 rpm) until the relation between the Ach and Bch waveforms are as shown in Fig. 8-2 (c).
5. Always make motor operation adjustments starting with 45 rpm and ending with 33 rpm.

### 8.2 MECHANISM ADJUSTMENT

#### ● Stylus Landing Position Adjustment

When the tone arm doesn't land in the correct position during automatic playback, adjust according to the following procedure.

1. Place a 30 cm record on the platter.
2. Press the PLAY/STOP button and start automatic playback. Note the direction and amount if the landing point is off. (How many mm to the inside or outside from the record grooves.)
3. Depress the PLAY/STOP button to return the tone arm to its rest.
4. Press the ARM-ELEVATION control to raise the stylus.
5. Move the tone arm to the outside edge of the record by hand.
6. Turn the adjustment screw with a small screwdriver according to the direction and amount checked at item 2 as follows:
  - When the stylus lands at the outside of the record, turn the adjustment screw in the  direction.
  - When the stylus lands at the inside of the record, turn the adjustment screw in the  direction.
 One half turn of the adjustment screws moves the tone arm about 12 mm.
7. After adjustment, press the PLAY/STOP button and check if the stylus landing point was correctly adjusted.  
If adjustment is incorrect, repeat items 3 to 6.

**Be careful not to damage the record and stylus when making this adjustment.**

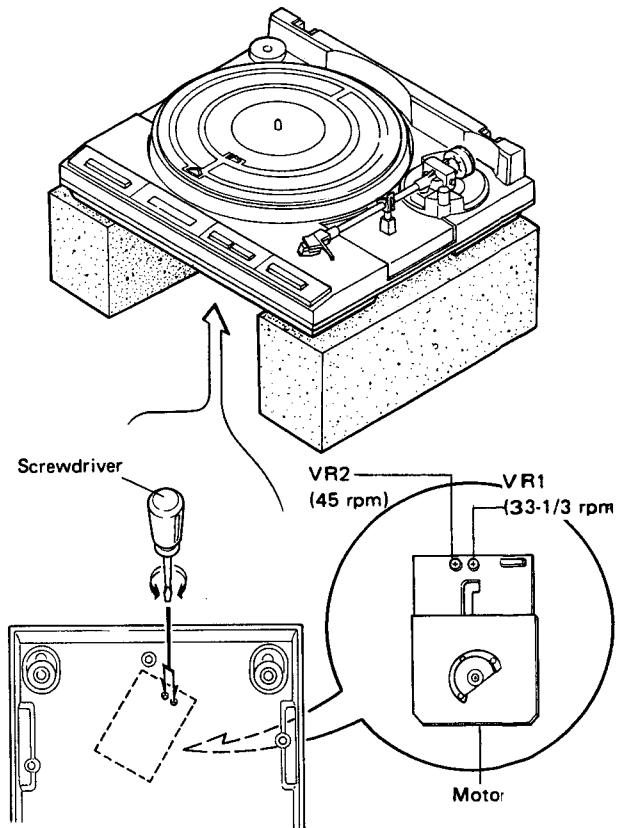

Fig. 8-1 Motor adjustment

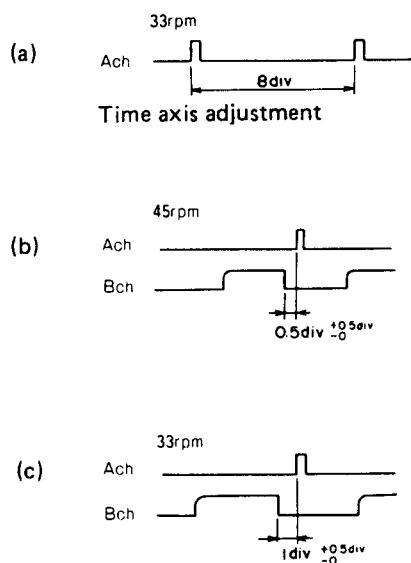

Fig. 8-2 Motor Operation Adjustment Waveforms

**Adjustment using a test record**

(Lowering position adjustment is made with the tone arm on the outside edge of the record.)

30 cm landing point . . . Lands between count 306 and 313.

17 cm landing point . . . Lands between count 175 and 183.

● **Auto-Return Position Adjustment**

When auto-return occurs too early or too late, make the following adjustments.

1. Check the stylus landing position. If the stylus does not land at the correct position, adjust the landing position.
2. Set the ARM-ELEVATION control to UP and turn the auto-return adjustment screw fully counter-clockwise.
3. Move the tone arm as far as it will go toward the inside.
4. When the auto-return adjustment screws is turned slowly clockwise, the tone arm will begin to move toward the inside.
5. Stop turning the adjustment screw at the point at which there is a space of 32 mm between the cartridge stylus and the center shaft. (Fig. 8-3)
6. After adjustment, check is auto-return is performed correctly and that the stylus landing position is correct.

● **Arm Elevation Height Adjustment**

1. Press the ARM-ELEVATION control to raise the stylus.
2. Loosen the height control screw.
3. Turn the height adjustment screw to set the stylus 30.5 mm over the cabinet (Fig. 8-3).
4. Tighten the height control screw to set the stylus 25 mm over the cabinet.

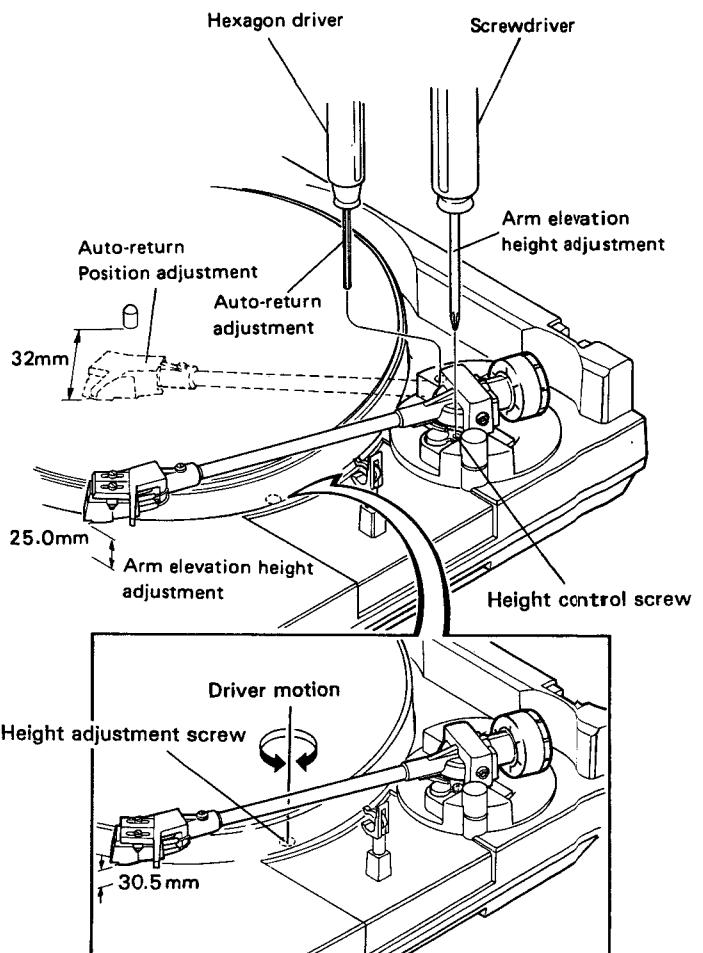

Fig. 8-3 Arm elevation height adjustment and auto-return adjustment

## 8. RÉGLAGE

### 8.1 RÉGLAGE DU FONCTIONNEMENT DU MOTEUR

1. Déposer la base inférieure.
2. Connecter le Ach de l'oscilloscope à deux traces, au bloc de la plaquette de circuit, à la broche No. 15 de Q3 (PD0008), et GND. Régler l'axe de temps de telle manière qu'une période de la forme d'onde de sortie soit égale à 8 divisions en mode de 33 tours/minute. Fig. 8-2(a).
3. Connecter le Bch de l'oscilloscope à deux traces à la broche No. 15 de Q1 (PA2017), et GND. Régler VR2 (45 tours/minute) de telle manière que le rapport entre les formes d'onde Ach et Bch en mode de 45 tours/minute soit celui indiqué par la Fig. 8-2(b).
4. Régler le plateau sur 33 tours/minute et régler VR1 (33 tours/minute) jusqu'à ce que le rapport entre les formes d'onde de Ach et Bch soit celui indiqué par la Fig. 8-2(c).
5. Toujours effectuer les réglages de fonctionnement du moteur en commençant avec le mode de 45 tours/minute et en terminant avec celui 33 tours/minute.

### 8.2 RÉGLAGE DU MÉCANISME

#### • Réglage de la position de descente de la pointe de lecture

Lorsque le bras de lecture ne descend pas sur la position correcte lors de la lecture automatique, réaliser le réglage en suivant la procédure suivante.

1. Placer un disque de 30cm sur le plateau.
2. Appuyer sur la touche de lecture/arrêt (PLAY/STOP) et faire débuter la lecture automatique. Noter la direction et la grandeur de l'écart du point de descente. (Nombre de mm vers l'intérieur ou vers l'extérieur du sillon.)
3. Appuyer sur la touche PLAY/STOP pour faire retourner le bras de lecture sur son support.
4. Appuyer sur la touche de relevage du bras ARM-ELEVATION pour soulever la pointe de lecture.
5. Déplacer à la main le bras de lecture vers la périphérie du disque.
6. Tourner la vis de réglage à l'aide d'un petit tournevis, en fonction de la direction et de la quantité mesurées lors du point 2, comme suit:

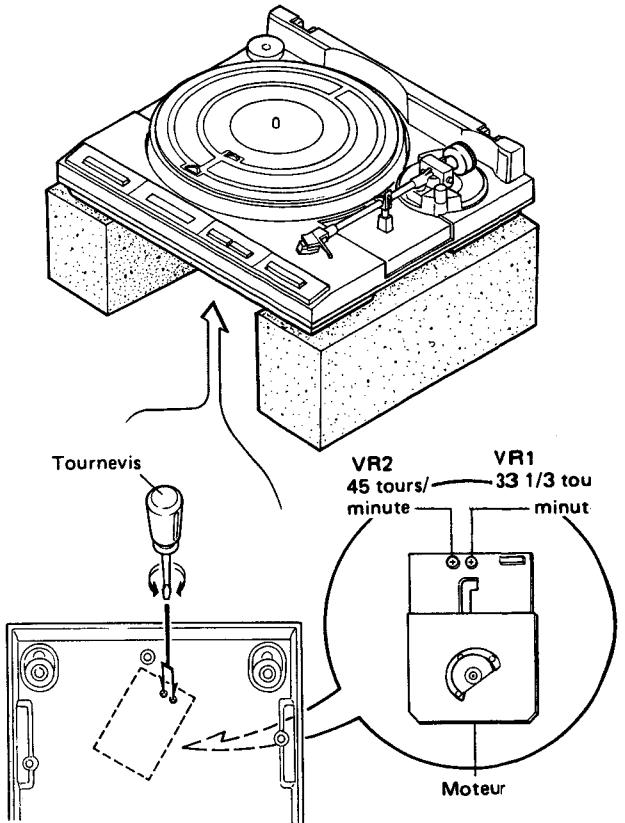

Fig. 8-1 Réglage du moteur

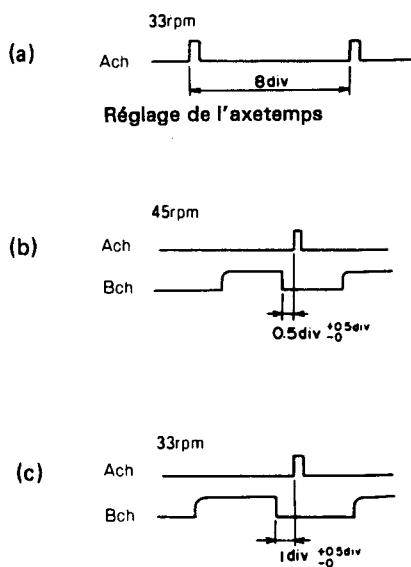

Fig. 8-2 Formes d'onde de réglage du fonctionnement du moteur

- Lorsque la pointe de lecture descend vers l'extérieur du disque, tourner la vis de réglage dans le sens ↗
  - Lorsque la pointe de lecture descend vers l'intérieur du disque, tourner la vis de réglage dans le sens ↙
- Un demi-tour de la vis de réglage correspond à un déplacement d'environ 12mm du bras de lecture.
7. Après le réglage, appuyer sur la touche PLAY / STOP et vérifier si le réglage de la position de descente a été correctement effectué. Si le réglage n'est pas correct, répéter les étapes 3 à 6.

Prendre soin de ne pas endommager le disque ni la pointe de lecture en réalisant ce réglage.

#### Réglage au moyen d'un disque d'essai

(Le réglage de la position d'abaissement est réalisé avec le bras de lecture placé sur la périphérie du disque.

Point de descente

pour 30cm ..... Descente entre les valeurs 306 et 313.

Point de descente

pour 17cm ..... Descente entre les valeurs 175 et 183.

#### ● Réglage de la position de retour automatique

Réaliser les réglages suivants lorsque le retour automatique se produit tôt ou trop tard.

1. Contrôler la position de descente de la pointe de lecture. Si la pointe de lecture ne descend pas sur la position correcte, ajuster la position de descente.
2. Régler la touche de relevage du bras ARM-ELEVATION sur la position "UP" et tourner la vis de réglage du retour automatique à fond dans le sens contraire des aiguilles d'une montre.
3. Déplacer le bras de lecture le plus possible vers l'intérieur.
4. Lorsque la vis de réglage du retour automatique est tournée lentement dans le sens des aiguilles d'une montre, le bras de lecture commence à se déplacer vers l'intérieur.
5. Arrêter de tourner la vis de réglage sur le point pour lequel il y a un écart de 32mm entre la pointe de lecture et l'axe central. (Fig. 8-3)
6. Après le réglage, vérifier que le retour automatique se réalise correctement et que la position de descente de la pointe est correcte.

#### ● Réglage de la Hauteur D'élévation du Bras Acoustique

1. Appuyer sur la commande de soulèvement du bras (ARM ELEVATION) pour soulever la pointe de lecture.
2. Desserrer la vis de contrôle de la hauteur.
3. Tourner la vis de réglage de hauteur pour régler la pointe à 30.5 mm au-dessus du coffret (Fig. 8-3).
4. Serrer la vis de contrôle de la hauteur pour régler la pointe à 25 mm au-dessus du coffret.

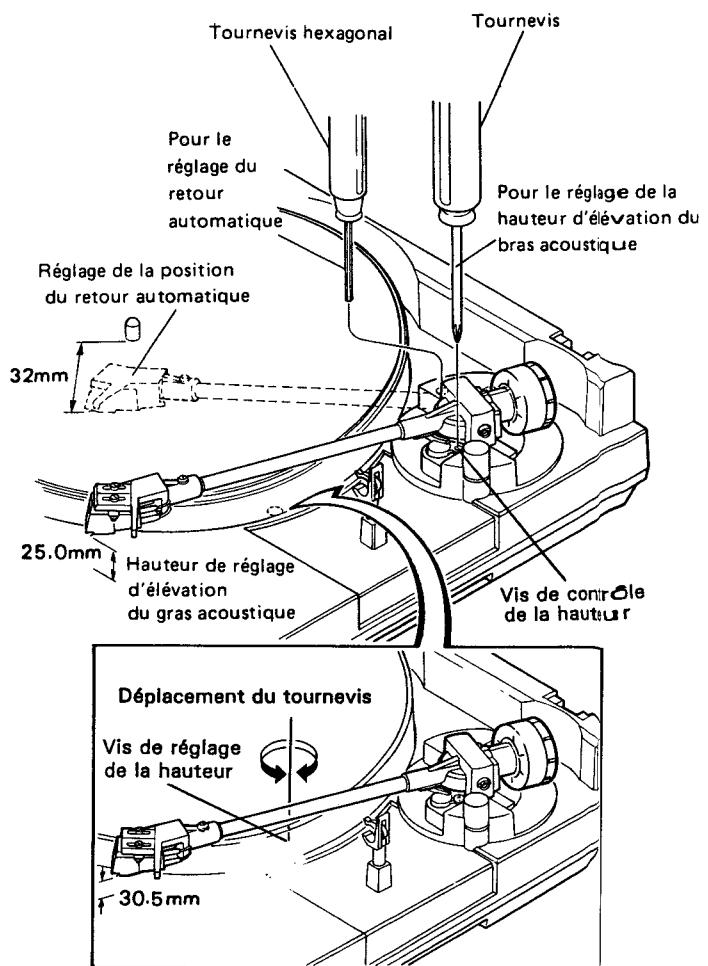

Fig. 8-3 Réglages de la hauteur d'élévation du bras acoustique et du retour automatique

## 8. AJUSTE

### 8.1 AJUSTE DE LA OPERACIÓN DEL MOTOR

1. Sacar la sub-base.
2. Conectar el Ach del osciloscopio de trazas dobles a la unidad de tablero de circuito, al pasador No. 15 de Q3 (PD0008) y GND. Ajustar el eje de tiempo, de manera que la forma de onda de salida sea igual a 8 divisiones en el modo de 33 rpm. Figura 8-2(a).
3. Conectar el Bch del osciloscopio de trazas dobles a Q1 (PA2017) pasador No. 15, y GND. Ajustar el VR2 (45 rpm) de manera que la relación entre las formas de onda de Ach y Bch en el modo de 45 rpm sea como se muestra en la Figura 8-2(b).
4. Fijar el disco giratorio a 33 rpm y ajustar el VR1 (33 rpm) hasta que la relación entre las formas de onda Ach y Bch sea como se muestra en la Figura 8-2(c).
5. Siempre efectúe los ajustes de la operación del motor comenzando por 45 rpm y terminando con 33 rpm.

### 8.2 AJUSTE DE LA POSICIÓN DE DESCENSO DE LA AGUJA

Cuando el brazo fonocaptor no desciende en la posición correcta durante la reproducción automática, ajustar de acuerdo con el procedimiento siguiente.

1. Poner un disco de 30cm sobre el plato.
2. Presionar el botón de inicio/reproducción (PLAY/STOP) e iniciar la reproducción automática. Notar la dirección y cantidad si el punto de descenso es incorrecto. (Cuántos mm hacia el interior o exterior de los surcos del disco.)
3. Presionar el botón de inicio/reproducción (PLAY/STOP) para hacer volver el brazo fonocaptor a su posición de apoyo.
4. Presionar el control de elevación del brazo ARM ELEVATION para hacer ascender la aguja.
5. Desplazar el brazo fonocaptor hacia el borde exterior del disco con la mano.
6. Girar el tornillo de ajuste con un destornillador pequeño de acuerdo con la dirección y cantidad comprobadas en el ítem 2 del modo siguiente:
  - Cuando la aguja desciende fuera del disco, girar el tornillo de ajuste en la dirección
  - Cuando la aguja desciende en el interior del disco, girar el tornillo de ajuste en la dirección
 Media vuelta de los tornillos de ajuste desplaza el brazo fonocaptor unos 10mm.

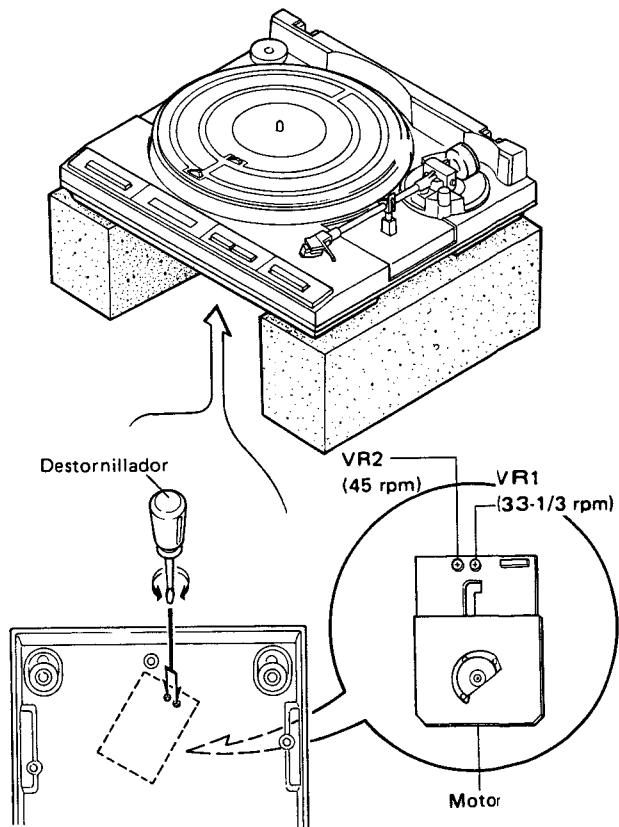

Figura 8-1 Ajuste del motor.

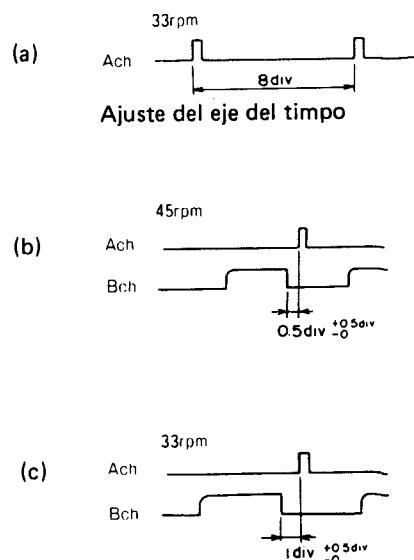

Figura 8-2 Formas de onda de ajuste de la operación del motor

7. Después del ajuste, presionar el botón de reproducción/parada (PLAY/STOP) y comprobar si el punto de descenso de la aguja se ha ajustado correctamente.

Si el ajuste es incorrecto, repetir los items 3 al 6.

**Tener cuidado de no dañar el disco ni la aguja al efectuar este ajuste.**

#### Ajuste empleando un disco de prueba

(El ajuste de la posición de descenso se efectúa con el brazo fonocaptor sobre su borde exterior del disco.)

##### Punto de descenso

para 30cm ..... Desciende entre el cómputo 306 y 313.

##### Punto de descenso

para 17cm ..... Desciende entre el cómputo 175 y 183.

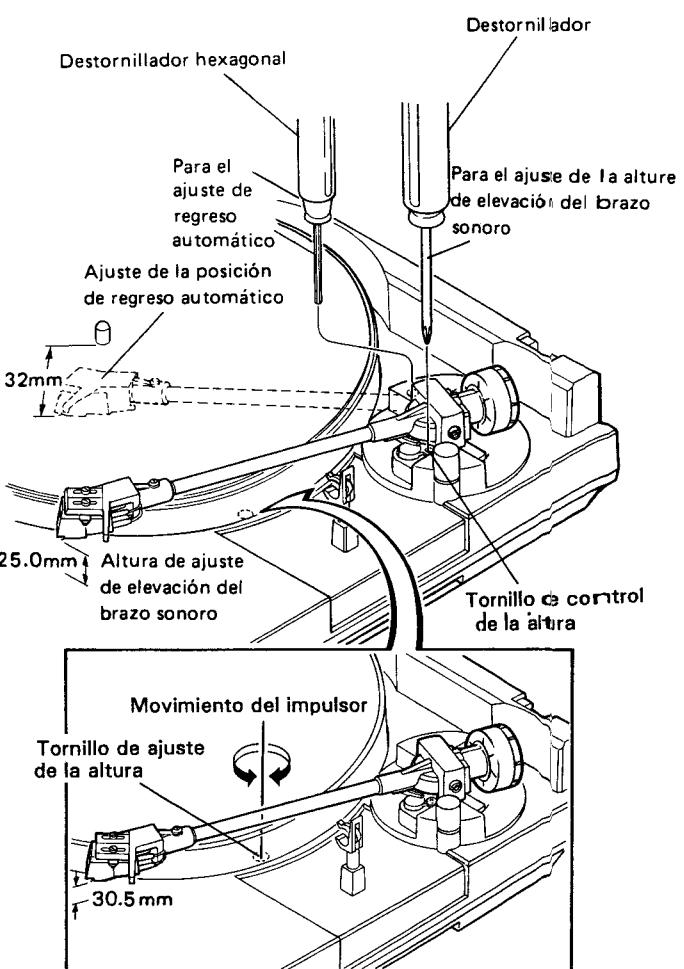

#### • Ajuste de la posición de retorno automático

Cuando el retorno automático se produce demasiado rápido o demasiado tarde, efectuar los ajustes siguientes.

1. Comprobar la posición de descenso de la aguja. Si la aguja no desciende en la posición correcta, ajustar la posición de descenso.
2. Ajustar el control de elevación del brazo ARM ELEVATION en la posición UP y girar el tornillo de ajuste de retorno automático completamente hacia la izquierda.
3. Desplazar el brazo fonocaptor hacia el interior al máximo.
4. Cuando se giran lentamente los tornillos de ajuste de retorno automático hacia la derecha, el brazo fonocaptor empleará a moverse hacia el interior.
5. Dejar de girar el tornillo de ajuste en el punto en el que haya un espacio de 32mm entre la aguja de la cápsula y el eje central. (Figura 8-3)
6. Después del ajuste, comprobar que la operación de retorno automático se efectúe correctamente y que la posición de descenso de la aguja sea la correcta.

#### ● Ajuste de la Altura de Elevación del Brazo Sonoro

1. Presione el control ARM ELEVATION para que ascienda la aguja.
2. Afloje el tornillo de control de la altura.
3. Gire el tornillo de ajuste de la altura para ajustar la aguja a 30,5 mm sobre la caja (Fig. 8-3).
4. Apriete el tornillo de control de la altura para ajustar la aguja a 25 mm sobre la caja.
